Subject: Willamette River Portland Harbor cleanup proposal

I believe the standard the EPA should hold those to, that contributed to the pollution in the harbor, is to make them pay to clean up the river to it's natural state before it got polluted. Remove all traces of polluted sediment, so the river is clean and usable within the next couple of years, not decades. I've lived in Oregon my entire life, over 65 years and I want to see the river cleaned up so people can fish, swim and recreate in the river like it was before those companies decided it was a good idea to dump their pollutants in the river.

Thank You
